

In-flight Service Trolley

Options:

- **Pull-out table for worktop extension**
- **Flip-over table extension**
- **Several service side boxes**
- **Oven rack attachment provision**
- **Various trolley tops**

Driessen offers a standard In-flight Service trolley in Atlas and KSSU design. Both designs have proven themselves in a lightweight version as well.

In addition to standard trolleys, Driessen provides an infinite range of trolleys and trolley accessories to meet your specific requirements.

Structure

The trolley's structure consists of foam core sandwich panels, framed by anodized aluminium extruded profiles. Each open door is held in place by magnets, integrated into the sandwich panels. All panels are furnished with a decorative finish in standard and customer-specified colours.

The latch assembly has a rigid pull handle with a customs seal and padlock provision. The worktop panel can have built-in dry ice drawers. The aluminium side panel's inner skin has deep pressed runners, and the bottom is free of dirt-collecting screw head cavities.

Brake system

The trolley is equipped with a maintenance-free brake system that acts on all four swivel castors. The break system of the half size trolley can act on either two or all four-swivel castors. Brake and release pedals have a flip-up design. Maximised wheelbase and track width offer optimum trolley stability.

Certification

Driessen designs meet all relevant airframe specifications and airworthiness requirements. All trolleys are delivered with an EASA Form 1 and, on request, with Airbus, Boeing, FAA or local authority certification.
