

## Oven insert

### Options Atlas oven insert:

- **Extended depth for six meals per tray;  
48 in total**
- **Embossed name or logo**
- **Stainless steel inserts**
- **Skid stoppers**

### Options KSSU oven insert:

- **Reduced runner space for inserting  
eight levels**
- **Embossed logo or name**
- **Special runner to prevent tray tilting**

Driessen supplies aluminium and stainless steel oven inserts in Atlas and KSSU design, that fit in both convection and steam ovens.

## Oven Insert

Standard, the oven inserts are constructed of anodised aluminium. The front is framed by a solid heat-treated aluminium extrusion. A recessed aluminium-carrying handle on the top completes the oven insert housing. A logo can be embossed on the oven insert's top surface.

The oven tray runners are integrated into the insert sides. The rear panel cut-out accommodates the oven fan and houses the oven's temperature sensor.

Eight oven skids fit in the oven insert, providing room for 32 standard-size meals or 48 meals in the extended oven insert.

## Oven skids

The oven skids are designed to interface with Driessen's lightweight oven inserts.

Driessen supplies aluminium skids in Atlas and KSSU design. The anodised skid is deep drawn to provide a strong product with a seamless and smooth interior.

Oven skids have their own part number and must be ordered separately.

## Certification

Driessen designs meet all relevant airframe specifications and airworthiness requirements. All oven inserts are delivered with an EASA Form 1 and, on request, with Airbus, Boeing, FAA or local authority certification.
